

Discomatic Mambo – Volltext

Powerful, sleek and revolutionary

Discomatic Mambo: a compact powerhouse for smaller to medium-sized areas

Capability and a compact construction are not necessarily mutually exclusive. The new Discomatic Mambo combines cleaning power and endurance with agility and extremely easy operation. It is the most compact scrubbing vacuum cleaner available with a 30 litre fresh water tank.

The Discomatic Mambo sets new standards in the category of cleaning machines for smaller to medium-sized areas. It is robustly constructed and powerful, and yet agile enough to excel with immaculate cleaning results even in slightly cluttered rooms. The innovative machine concept is uncompromisingly directed at longer periods of cleaning work without any interruptions. The Discomatic Mambo not only has a 30 litre fresh water tank and hence will never go short of water. Additionally, it is equipped with an extra-powerful lithium ion battery. This gives a constant and high output in all charge states and has a high charging capacity so that it does not need to be recharged so often. The lithium ion battery lasts on average four times longer than a conventional rechargeable battery.

Proven disk brush system and precise running

The cleaning technology of the Discomatic Mambo is based on the proven double disk brush system. The two disk brushes provide just the right amount of force and scrubbing action to the surface so as to ensure the best possible and completely hygienic cleaning effect. They ensure that the machine is easy to operate and control by supporting the forward motion of the machine and keeping the Discomatic Mambo precisely on course.

Well thought-out solution for liquids management

The water feed can be regulated from the control panel by the water pump that is built in as standard. At the customer's request the Discomatic Mambo can be equipped with a fully integrated dosage system that can be activated at the press of a button. The system ensures that the amounts of fresh water and chemicals are matched optimally to one another at all times. This means that, in the interests of economic and environmentally-friendly operation, only as much cleaning solution is used as is actually needed, and not a single drop more.

Operation made simple

The design of the Discomatic Mambo is fully oriented towards its function and in particular takes ergonomic points of view into consideration. The cleaning personnel should be able to work with the machine so that it is not tiring to operate or stressful on the body. For that reason the upright handle is continuously adjustable. It can be set to the size of the operator and can also be set to suit the relevant situation while the machine is running. The principle of the control panel is "More is less:" Four logically arranged control buttons are enough to operate the machine and keep it under control.

The Discomatic Mambo also shows how user-friendly it is even when not in operation. Thanks to the support wheel that is extended automatically, it can be moved from one location to another for work without needing a great deal of effort.

Built for a long working life

The purchase of a Discomatic Mambo is a worthwhile investment for use in cleaning smaller and medium-sized areas. The typically robust construction and the reliable technology reduce the maintenance intervals and provide a guarantee of a long working life.
