

Discomatic Tango – full text

Small, powerful and elegant

Discomatic Tango: the efficient alternative to the mop

If you think the mop is irreplaceable, think again. The compact and agile Discomatic Tango scrubber-drier from Wetrok slips through where others get stuck. It is the only machine in its class to provide suction when moving backwards as well as forwards.

The Discomatic Tango scrubber-drier finally does away with all that fussing around with a bucket and mop. It is specially designed for cleaning small areas like wet rooms, consulting rooms, small kitchens, small storage rooms, or entrance and stairwell areas. With its low vertical clearance, the Discomatic Tango also reaches all those areas which can otherwise only be accessed with a mop. For example, it can reach under benches or other objects with parts arranged at low heights, like desks, counters, or sanitary equipment, without causing undue disturbance.

High performance with two circular brushes

The Tango's design combines compactness with high performance. It is among the smallest and lightest scrubber-driers on the market, despite having two circular brushes. The lightweight lithium-ion battery takes up hardly any room at all, but is a real powerhouse. It consistently delivers high performance, even when low, and has a long service life. Its clever connection system means it only takes a few steps to set up and shut down.

Cleans backwards too

Unlike all other scrubber-driers, the Tango provides suction during both forward and backward movements. With suction apparatus at front and back, floors dry out almost as quickly as they are cleaned. Since cleaning is not interrupted and does not depend on the direction of movement, and with drying being so quick, the cleaning process is highly efficient. Compared with using a mop, the Discomatic Tango operator delivers significantly better cleaning performance per unit of time. Not to mention the impeccable results in hygiene terms, since the machine always uses fresh water. The high level of efficiency means an investment in the Tango will pay for itself in no time at all.

Flexible to use and operate

The Discomatic Tango is small, light and easy to operate. The flexible guide element with the water tank and control panel is continuously adjustable - even during cleaning. All it takes is a quick pull on the lever. The two water tanks can be removed at the push of a button when transporting the machine, so it easily fits into a car's luggage space.

The quality of the Discomatic Tango also shines through in its functional yet elegant design. This is the work of renowned American product designer Tom Tjaarda, who became world-famous through his car designs.
